

PRIYANSHI

Associate Software Developer | Full Stack Developer | Backend Developer

India | chauhanpriyanshi2004@gmail.com | +91-9654103397

LinkedIn

PROFESSIONAL SUMMARY

Associate Software Developer with hands-on experience in full-stack and backend software development using Node.js, React.js, Python, Django, Perl, JavaScript, PostgreSQL, and MongoDB. Experienced in designing and developing RESTful APIs, backend services, database-driven applications, authentication workflows, caching solutions, and internal business applications. Strong experience in catalog management, product workflows, pricing, metadata, category management, API integration, debugging, production issue resolution, and legacy application modernization. Experienced in integrating AI and LLM-based capabilities for product-field generation and business-keyword generation. Familiar with Git, Jira, Swagger/OpenAPI, Linux, Agile development, and software development lifecycle practices.

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, Perl, C++, SQL

Frontend Development: React.js, JavaScript, HTML5, CSS3

Backend Development: Node.js, Express.js, Django, RESTful APIs, REST API Development, Backend Services

Databases: PostgreSQL, MongoDB, SQL, Database Design, Complex Queries, Joins, Data Validation, Query Optimization

Software Engineering: Full Stack Development, Backend Development, API Integration, Authentication, Authorization, JWT, Caching, Debugging, Production Support, Legacy Application Modernization, Database Integration

API and Development Tools: Swagger, OpenAPI, Git, GitHub, Jira, Linux, VS Code

AI and Automation: Generative AI, LLM API Integration, Prompt Engineering, AI-powered Applications, AI-based Content Generation, Workflow Automation

PROFESSIONAL EXPERIENCE

Associate Software Developer

November 2025 – Present

TradeIndia - INFOCOM NETWORKS PVT LTD

India

- Develop and maintain full-stack and backend applications using Node.js, React.js, Python, Django, Perl, PostgreSQL, and MongoDB for business-critical catalog and product management workflows.
- Design and develop RESTful APIs for catalog management, product search, metadata, product information, OTP verification, background-removal workflows, and other business operations.
- Build database-driven applications using PostgreSQL, including complex SQL queries, joins, filtering, validation, status management, data integrity checks, and optimized database access.
- Implement backend caching mechanisms to improve data retrieval efficiency and reduce unnecessary database operations.
- Develop and enhance product-management workflows covering pricing, minimum order quantity, discount slabs, product attributes, category management, metadata, and private-category operations.
- Develop internal dashboards and backend services for private-category and deleted-product management, including JWT-based authentication and catalog-specific request handling.
- Integrate AI and LLM-based workflows for automated product-field generation and business-keyword generation, improving automation within catalog management processes.
- Troubleshoot and resolve production issues by analyzing application logic, API behavior, database queries, logs, and data inconsistencies.
- Perform debugging, testing, code maintenance, deployment support, and production issue resolution using Git, Jira, Linux, and existing development workflows.
- Collaborate with backend, frontend, and business teams to implement new functionality, investigate defects, validate database changes, and deliver production enhancements.

PROJECTS

Catalog Functionality Enhancement & Legacy Dashboard Migration Perl, Django, Python, PostgreSQL, JavaScript

- Enhanced catalog-management functionality across product, category, pricing, metadata, private-category, and product-management workflows.
- Migrated legacy Perl-based internal dashboards to Django, modernizing application architecture while preserving existing business logic and workflows.

- Developed backend services and APIs using Python, Django, Perl, and PostgreSQL for internal catalog-management operations.
- Implemented database-driven functionality involving complex SQL queries, joins, filtering, validation, status handling, and data consistency checks.
- Improved maintainability of legacy business applications by restructuring existing functionality into modern Django-based components.
- Investigated and resolved production defects, data inconsistencies, and functional issues through application debugging and database-level validation.

Mobile Catalog API

Node.js, Express.js, PostgreSQL, JWT, Swagger/OpenAPI

- Developed RESTful APIs using Node.js and Express.js for catalog metadata, product information, search functionality, footer information, and catalog-specific operations.
- Implemented PostgreSQL-based data retrieval using structured service-layer and reusable query-execution patterns.
- Implemented JWT-based authentication and catalog-level request validation for secure API access.
- Designed API request and response workflows for reliable integration between frontend clients and backend services.
- Documented REST APIs using Swagger/OpenAPI to support API testing, development, and integration.

KEY ENGINEERING HIGHLIGHTS

- **Backend Engineering:** Developed RESTful APIs, backend services, authentication workflows, database integrations, and caching mechanisms using Node.js, Express.js, Python, Django, Perl, and PostgreSQL.
- **Full Stack Development:** Worked across frontend and backend layers using React.js, JavaScript, Node.js, Python, Django, and database technologies.
- **Database Engineering:** Developed complex PostgreSQL queries involving joins, filtering, validation, status management, data integrity checks, and optimized data retrieval.
- **Legacy Modernization:** Migrated Perl-based internal dashboards to Django while maintaining existing business functionality and workflows.
- **AI Integration:** Integrated AI and LLM-based workflows for automated product-field and business-keyword generation.
- **Production Engineering:** Performed debugging, testing, issue investigation, data validation, deployment support, and production defect resolution.

EDUCATION

Bachelor's Degree in Computer Science Engineering (Artificial Intelligence)

2026

IIMT College of Engineering, Greater Noida

CGPA: 8.05/10

ADDITIONAL INFORMATION

Core Areas: Software Engineering, Full Stack Development, Backend Development, REST API Development, Database Management, API Integration, AI Integration, Application Development

Development Environment: Git, GitHub, Jira, Swagger/OpenAPI, Linux, VS Code

Career Interests: Software Engineer, Full Stack Developer, Backend Developer, Node.js Developer, React Developer, Python Developer
